NZA LAW Project - Coding Temple

In this project, you will be tasked with creating a Flask application based on the previous website for the "law firm". This time however, you will need to create more components than before.

TASK:
- Create Flask Application using best practices mentioned in class
  - Create seperate HTML template files using the template engine(Jinja).
  - Create registration and login flow
  - Create and use database
  - Create contact form that will take in and handle "potential client" contact info

IMPORTANT NOTE : The project is not considered complete until A github repo has been created, and the github link has been placed inside of the google classroom assignment for your group.
